## HRT-18G FIBER-OPTIC TRANSMITTER

## 50 MHz to 18 GHz

#### **FEATURES**

- 50 MHz to 18 GHz frequency range
- -40°C to +85°C operating temperature
- Small size
- Plug-and-play
- · No external circuits required
- Field-removable optical attenuator for high-loss installations
- Monitors for optical carrier and laser temperature

#### **APPLICATIONS**

- Antenna remoting
- · Military, shipboard
- Local oscillator remoting
- · Interfacility communication links
- · Wideband fiber-optic delay lines

The Narda-MITEQ HRT series of fiber-optic transmitters is designed to be a high-reliability, wideband, high dynamic range product from its initial concept. Some features that contribute to its reliability are:

- · Hermetically sealed KOVAR housing
- Oversized thermo-electric cooler to maintain laser stability over a wide temperature range
- Internal voltage regulation and reverse polarity protection
- RFI-shielded
- Field-proven microelectronic circuits and assembly techniques

The HRT series transmitters are for use with single-mode optical fiber to create communication and data links that are secure and provide end-to-end isolation from damaging spikes and surges.

# HRT-18G FIBER-OPTIC TRANSMITTER

### **ELECTRICAL SPECIFICATIONS**

| PARAMETERS                      | CONDITION                  | UNITS            | MINIMUM | TYPICAL | MAXIMUM |
|---------------------------------|----------------------------|------------------|---------|---------|---------|
| Operating Frequency             | 3 dB bandwidth             |                  | 50 MHz  |         | 18 GHz  |
| Gain (electrical to optical)    |                            | dB               | 10      | 14      | 20      |
| Flatness                        |                            | dB, peak-to-peak |         |         | 4       |
| Noise Figure                    |                            | dB               |         | 22      | 25      |
| Group Delay                     | Peak-to-peak               | ns               |         | 0.12    | 0.2     |
| VSWR                            | Input                      |                  |         | 1.7     | 2.0     |
| Phase Noise                     | 100 Hz offset              | dBc/Hz           |         |         | -100    |
| Input Power at 1 dB Compression |                            | dBm              | -15     | -10     |         |
| Maximum Input Power             | No damage                  | dBm              |         |         | +10     |
| Impedance                       | Input                      | Ohms             |         | 50      |         |
| RF Connector Type               | SMA female (male optional) |                  |         |         |         |

Note: Performance is specified at 23 °C, with one meter of fiber.

### **OPTICAL SPECIFICATIONS**

| PARAMETERS                           | CONDITION                                | UNITS | MINIMUM | TYPICAL | MAXIMUM |
|--------------------------------------|--|-------|---------|---------|---------|
| Wavelength (other options available) |  | nm    | 1300    | 1310    | 1320    |
| Spectral Width                       | FWHM                                     | nm    |         | 0.06    | 0.1     |
| Optical Power in Fiber               | See note                                 | mW    | 5       | 7       | 10      |
| Side-mode Suppression Ratio          |  | dB    | 30      | 40      |         |
| Optical Connector Type               | FC/APC standard, other styles on request |       |         |         |         |
| Optical Fiber                        | Single-mode, SMF-28 or equivalent        |       |         |         |         |

Note: Units are shipped with a 3 dB optical attenuator installed. This attenuator may be removed by the customer to overcome excess fiber loss. However, take care not to saturate the receiver.

### **POWER SUPPLY AND MONITOR**

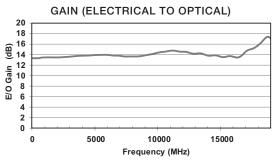

|     |                           | VOLTAGE (VDC) |      | TYPICAL |                         |   |
|-----|---------------------------|---------------|------|---------|-------------------------|---|
| PIN | DESCRIPTION               | MIN           | NOM  | MAX     | CURRENT (A)             | NOTE  |
| 1   | Laser Diode Cooler        | 3             | 4    | 6       | 0.250                   | Current increases with case temperature up to 1.2 A                     |
| 2   | Laser Temperature Monitor | -0.5          |      | +0.5    |                         | < -0.5 V indicates laser temperature is too high                        |
| 3   | Optical Power Monitor     | -2.5          | -2.0 | -1.5    |                         |   |
| 4   | Ground, Chassis           |               |      |         |                         |   |
| 5   | Laser and Amplifier Bias  | +11           | +12  | +15     | 0.39                    |   |
| 6   | Laser Diode Heater        | -15           | -12  | -11     | 0.01<br>(0.7 A maximum) | Current will increase as case temperature goes below approximately 5 °C |

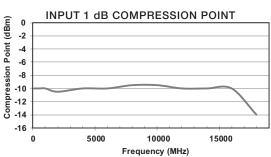

Notes: Values with 25 °C baseplate temperature.

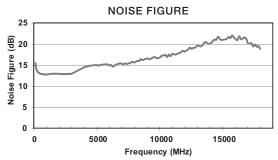

The +5 V supply connection does not have an internal voltage regulator or reverse polarity protection in order to lower heat dissipation due to the potential high current this connection can draw to supply the laser cooler.

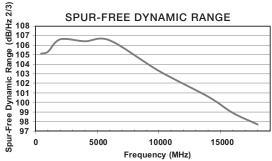

### TYPICAL TEST DATA

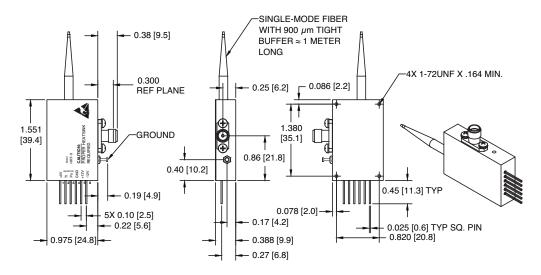

## TRANSMITTER OUTLINE DRAWING

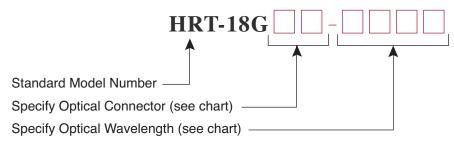

Notes: Dimensions shown are in inches and those shown in brackets [ ] are in millimeters. Unit weight is approximately 65 grams.

# HRT-18G FIBER-OPTIC TRANSMITTER

#### ORDERING INFORMATION

Specify by part number: HRT-

### **OPTICAL CONNECTOR CHART**

| DESIRED CONNECTOR | PART NUMBER POST FIX     |
|-------------------|--------------------------|
| FC/APC            | standard (omit post fix) |
| SC/APC            | -SA                      |
| SC/PC             | -SC                      |
| ST/PC             | -ST                      |
| E2000/APC         | -EA                      |
| LC/APC            | -LA                      |
| LC/PC             | -LC                      |

### **WAVELENGTH CHART**

| DESIRED<br>WAVELENGTH | PART NUMBER POST FIX     |
|-----------------------|--------------------------|
| 1310 nm               | standard (omit post fix) |
| 1550 nm               | -1550                    |

Note: Other wavelengths available as special order.

#### **ENCLOSURES**

Enclosures are available for multiple transmitter or receiver combinations.

The material presented in this datasheet was current at the time of publication. Narda-MITEQ's continuing product improvement program makes it necessary to reserve the right to change our mechanical and electrical specifications without notice. If either of these parameters is critical, please contact the factory to verify that the information is current.

This material consists of Narda-MITEQ general capabilities information and does not contain controlled technical data as defined within the International Traffic in Arms (ITAR) Part 120.10 or Export Administration Regulations (EAR) Part 734.7-11.
