L3 Narda-MITEQ Introduces New High-Performance Logarithmic Amplifier

HAUPPAUGE, N.Y., September 25, 2017 – L3 Narda-MITEQ announced today the newest and smallest high-performance logarithmic amplifier in its product portfolio, the MLS-0206. The new amplifier is available now and was specifically designed for use in ELINT radar warning receivers, channelized receivers (Receive Strength Signal Indicator or RSSI), ESM systems, weather radar, airport landing systems and EW systems.

“Our new logarithmic amplifier is ideal for both commercial and military applications, and can be produced for use in space as well,” said Boris Bengier, Department Head of IF Products at L3 Narda-MITEQ. “The device has outstanding accuracy and linearity, and its overall excellent RF performance is complemented by an internal regulation scheme.”

L3’s MLS-0206 is just 0.45 inches by 0.45 inches. Manufactured using traditional MIC techniques, the amplifier has a temperature range of -40 °C to +85 °C and is provided in a hermetic seam-welded package. The construction of the device promotes excellent RF and reliability performance, and meets MIL-STD-202 requirements for shock, vibration, humidity and altitude.

L3 Narda-MITEQ combines more than 60 years of innovation and expertise in microwave and RF technology. The company designs and manufactures both standard and custom products, with stock delivery offered for an extensive selection of catalog components. L3 Narda-MITEQ provides a broad range of passive and active components, subsystems, pin diode control products, IMAs, SATCOM solutions and spaceborne components, as well as RF safety monitoring equipment. Its products and services support defense, research, communications, and medical and scientific end markets.
